

Prévention, dépistage et intervention face aux comportements perturbateurs des aînés

F-13

TRAINING

BRIEF DESCRIPTION OF THE TOOL:

Offered for 23 years, this customized training empowers the staff and managers of CHSLDs and residences for seniors when facing *the disruptive or particular behaviors* of some seniors, to reduce these behaviors and to defuse situations, with a setting-oriented approach.

Some seniors have psychological characteristics related to their senescence, their deficits or cognitive impairment. When basic needs are not met, reactive behaviors between residents and vis-à-vis staff can escalate, forcing a non-abusive and organized defusing intervention.

This training also aims to help develop intervention skills in situations of intragenerational between residents.
